## PROTECT YOUR SINK BASE CABINETS

This cabinet mat/liner protects your investment from water damage, cleaner spills and mold. Leak detection prevents damage to floors and walls.

## How to Measure and Install:

Existing Cabinets:
Order product size based on cabinet inside measurements and Actual Liner Size in product chart. Liner width must be equal to or slightly smaller than the inside cabinet width.
Trim Front Edge for Custom Fit:
Depth size range is in the Actual Liner Size column.
For Leak Detection:
Cut off drain cone tip, fit and mark cabinet overhang with drain cone, drill 3/8-in hole in cabinet overhang, install Cabinet Saver.

## IMPROVE YOUR TURN CYCLES

Our Project Support professionals can help you coordinate the products and services you need - with one invoice and one delivery. Learn more at LowesProSupply.com/ProjectSupport

BRM $=$ Butterum (Matte)
WJM = White Juparana (Matte)
GG = Granite (Gloss)
edge style
ND = No-Drip
$S Q=$ Square

## HOW TO MEASURE KITCHEN CABINETS

## STANDARD CABINETS

All wall cabinets are 12-in D
All base cabinets are 34-1/2-in H
Kitchen base cabinets are 24 -in $D$

## 1. WALL CABINETS:

Measure the width and height of each wall cabinet and identify the size of any fillers.

## 2. BASE CABINETS:

Measure the width of each base cabinet only and identify if it's a base, draw base, sink base, Iazy Susan, blind base, etc. Identify the size of any fillers.
3. Make a rough drawing of the shape of the kitchen on a sheet of paper and identify each base and wall cabinet, including all fillers, toe kick, end panels, scribe, inside and outside corner moulding, etc.

## If you are working from a blank space or partial kitchen:

1. Measure each individual kitchen wall in inches, not feet.
2. Make a rough drawing of the shape of the kitchen on a sheet of paper that includes each wall, door, doorway, window and protruding or recessed areas. At the top of each side of the paper, record the dimensions of that wall from one end to the other.
3. Measure each section of each wall and record those numbers on the drawing (example: wall length is 54 -in from right corner to outside edge of window casing; window is 37 -in wide; from window to end of wall is 42 -in). Record those numbers on your drawing under your first measurement that listed the full length of that wall.
4. Check accuracy of the measurements by adding up all the dimensions of each wall and comparing them to the total wall dimension recorded prior (example: $54-$ in +37 -in +42 -in $=133$-in). This is an essential step. Remeasure if the numbers do not add up.
5. Identify the center of the sink by measuring it to the corner of the wall in one direction, then from the center of the sink to the other end of the wall. Record those numbers on the drawing.
6. Measure the height from the floor to the ceiling in the kitchen in at least four locations.

Record all of the measurements and where they were taken. Be sure to mark the shortest dimension (example: 95-in near sink; 94-1/2-in near door; 95-1/5-in by light switch; 94-4/5-in center of floor; shortest dimension is $94-1 / 2-\mathrm{in}$ ). This measurement will determine the height of the cabinets and crown moulding.
7. If there are bulkheads/soffits (wallboard framed out from the ceiling to the top of your cabinets), measure their height and depth and mark them in another colored pencil or pen on the sketch sheet (skip this step if you plan to remove the bulkheads/soffits).
8. Note the location of each electrical outlet, switch or light fixture with a symbol on the rough sketch and be sure to record the height from the floor and distance to the nearest corner.
9. Measure and record the dimensions of all appliances (example: dishwasher 24-in W by 34-in H ; refrigerator 33 -in W by 82 -in H , etc.).
